Conversation with cwinklevoss at 2005-02-10 18:50:08 on David Gucwa (aim)
(18:50:08) CWinklevoss: hey
(18:50:13) CWinklevoss: so i am doing some testing
(18:50:23) CWinklevoss: imported friendster
(18:50:38) CWinklevoss: and on of the options under interested in is activity partners.
(18:50:44) CWinklevoss: im not sure if we have that, how does that work?
(18:51:48) David Gucwa: let me look at it
(18:52:03) CWinklevoss: k
(18:52:13) CWinklevoss: cause we call things diff than other networks
(18:52:14) CWinklevoss: as you know
(18:55:33) David Gucwa: right
(19:04:11) CWinklevoss: http://dev.connectu.com/importer/index.php?page_function=import&importFriendsterLogin=cameron@winklevoss.com&importFriendsterPassword=cameron&importMyspaceLogin=&importMyspacePassword=&importFacebookLogin=&importFacebookPassword=&importHi5Login=&importHi5Password=&importFacebook=Retrieve
(19:04:17) CWinklevoss: im looking at that one
(19:11:54) CWinklevoss: any thoughts?
(19:12:10) David Gucwa: yeah I'm doing some work on it
(19:12:17) CWinklevoss: k
(19:12:25) CWinklevoss: i hope there aren't a lot of instances
(19:12:30) CWinklevoss: interestes a fine cuase they are text
(19:12:57) CWinklevoss: status is tricky
(19:13:18) CWinklevoss: relationship status is tricky
(19:13:42) CWinklevoss: picutres should show pictures chosen on both networks
(19:15:05) CWinklevoss: and the about me for some reason is getting cut off
(19:15:14) David Gucwa: that's strange

Conversation with drttol at 2005-01-25 17:44:10 on David Gucwa (aim)
(17:44:10) dr ttol: hi
(17:44:14) David Gucwa: hi
(17:44:14) dr ttol: status
(17:44:24) David Gucwa: i just finished hi5 importing
(17:44:31) dr ttol: myspace?
(17:44:34) David Gucwa: so we've got friendster, hi5 and facebook in total
(17:44:41) David Gucwa: myspace is my next one
(17:44:45) dr ttol: what about myspace
(17:44:47) dr ttol: ij'
(17:44:48) dr ttol: ok
(17:44:58) David Gucwa: you can check it out if you want
(17:45:05) David Gucwa: http://cu.pnwsoft.com/import/

Conversation with drttol at 2005-01-27 16:44:12 on David Gucwa (aim)
(16:44:12) dr ttol: status?
(16:44:23) David Gucwa: caching umich
(16:44:36) dr ttol: how fast?
(16:44:37) David Gucwa: I'm going to put the script on the server and see if it goes any faster
(16:44:43) David Gucwa: it's been going for like 10 minutes
(16:44:49) dr ttol: how many profiles
(16:45:11) dr ttol: tfb is run by a techie, so becareful
(16:45:25) David Gucwa: there are two steps, it retrieves all the id's first, then it gets the profile for each id
(16:45:30) David Gucwa: it's still on the first step, up to 6000 ids
(16:45:51) dr ttol: ok, does it get the pictures as well
(16:46:29) David Gucwa: it gets the urls of the pictures
(16:46:44) dr ttol: what about for the importer
(16:48:23) David Gucwa: same
(16:48:42) David Gucwa: it displays the pictures when you're choosing which one you want, but it doesn't store the picture anywhere locally yet
(16:49:02) dr ttol: when they pick the picture, does it store it locally
(16:49:05) dr ttol: to the cu database
(16:49:24) David Gucwa: no
(16:49:30) David Gucwa: I don't know where they're supposed to go
(16:49:37) dr ttol: ask joel
(16:50:04) David Gucwa: yeah that's something I'll need to take care of eventually
(16:50:13) David Gucwa: but I'm trying to get the crawler finished up for now
(16:50:27) dr ttol: ok
(17:27:05) dr ttol: status
(17:27:11) David Gucwa: importing 4 schools
(17:27:16) David Gucwa: it's taking a while
(17:27:17) dr ttol: all profiles?
(17:27:26) David Gucwa: I think it's actually going slower on the server
(17:27:28) David Gucwa: than on my computer
(17:27:35) David Gucwa: still just grabbing id's
(17:28:00) dr ttol: hm
(17:28:03) dr ttol: which server are you using
(17:28:19) David Gucwa: 69.44.59.182
(17:28:27) dr ttol: it could e that the schoools have more ids than you think
(17:28:40) dr ttol: so the crawler works?
(17:28:47) David Gucwa: yeah
(17:29:22) dr ttol: which universities
(17:29:24) dr ttol: do we have umass
(17:29:29) David Gucwa: no I don't have a umass login
(17:29:38) dr ttol: rdegutis@student.umass.edu
(17:29:40) dr ttol: ruth1783
(17:29:49) David Gucwa: I'm getting umich, cornell, yale and harvard
(17:30:06) dr ttol: ok
(17:30:07) dr ttol: get umass next
(17:30:40) David Gucwa: k
(17:31:00) dr ttol: we want to import the top i2hub schools first
(17:31:48) David Gucwa: ok
(17:31:54) David Gucwa: well I've used all the logins you gave me
(17:32:09) David Gucwa: so if you give me more logins I can start importing
(17:32:13) dr ttol: ok
(17:32:14) dr ttol: you mean
(17:32:17) David Gucwa: also I'm waiting for wellesley to start showing emails again

(17:32:19) dr ttol: you've imported all the ones i gave you
(17:32:33) David Gucwa: yes
(17:32:37) David Gucwa: in the process of, at least
(17:32:41) dr ttol: ok
(17:32:43) dr ttol: yee@bu.edu
(17:32:45) dr ttol: ab1036
(17:34:00) David Gucwa: ok I started that one
(17:34:22) dr ttol: check to make sure the logins are valid
(17:34:23) dr ttol: im not sure
(17:34:35) dr ttol: barroseu@bc.edu
(17:34:39) dr ttol: eutychius
(17:34:50) dr ttol: beelzebub@brown.edu
(17:34:53) dr ttol: asdfgh
(17:36:50) dr ttol: hoganc@alum.mit.edu
(17:36:52) dr ttol: csfb
(17:36:58) dr ttol: porcella@princeton.edu
(17:36:58) dr ttol: angelo
(17:37:31) dr ttol: carlsson@stanford.edu
(17:37:35) dr ttol: fake_pwd
(17:37:46) dr ttol: maria.rocha_oliveira@tufts.edu
(17:37:47) dr ttol: maria
(17:37:54) dr ttol: Stinab8@ucla.edu
(17:37:55) dr ttol: divya
(17:38:15) dr ttol: Sen4@georgetown.edu
(17:38:20) dr ttol: sexyrena
(17:38:34) dr ttol: rl6@duke.edu
(17:38:35) dr ttol: nacho
(17:38:38) dr ttol: some may not work
(17:41:04) David Gucwa: k
(17:44:45) David Gucwa: yeah 3 or 4 didn't work
(17:44:47) David Gucwa: I started the rest
(17:45:05) dr ttol: which ones didnt
(17:46:39) David Gucwa: rl6@duke.edu Sen4@georgetown.edu porcella@princeton.edu hoganc@alum.mit.edu
(17:47:59) David Gucwa: it's got 46,000 id's so far and still going
(17:48:08) David Gucwa: in total from all of them
(17:48:48) dr ttol: we need the profiles
(17:48:52) dr ttol: not just ids
(17:49:45) David Gucwa: I know
(17:50:10) dr ttol: singer.d@neu.edu
(17:50:12) dr ttol: 1211
(17:50:39) dr ttol: mj405@nyu.edu
(17:50:41) dr ttol: rajubros
(17:52:09) dr ttol: how many proiles?
(17:52:21) David Gucwa: none yet, I'll start that
(17:52:39) dr ttol: ok
(17:55:33) dr ttol: let me know when we hit 100 profiles
(17:56:54) David Gucwa: we've probably hit that by now
(17:57:19) dr ttol: we're prob setting up huge alarms at thefacebook
(17:57:30) dr ttol: how can we go faster
(17:58:22) dr ttol: procella@princeton.edu
(17:58:23) dr ttol: frankmaria
(17:58:56) David Gucwa: I'm not sure we can go any faster
(17:59:14) dr ttol: what if we had the scripts running from other computers at te same time
(17:59:32) David Gucwa: do we have the proxies available yet
(17:59:36) dr ttol: yes

(17:59:54) dr ttol: unix15.dmbhosting.com
(17:59:58) dr ttol: i2hub / Importer123
(18:00:05) dr ttol: 66.96.217.229
(18:00:13) dr ttol: i2hub / TX6ADGXIAHR
(18:00:19) dr ttol: 67.131.250.102
(18:00:23) dr ttol: i2hub / 4it2AXqi
(18:00:28) dr ttol: 67.18.33.226
(18:00:29) David Gucwa: do these have ssh access
(18:00:33) David Gucwa: I can't seem to get into the first one
(18:00:34) dr ttol: i2hubtes / Importer123
(18:00:41) dr ttol: 69.56.226.102
(18:00:44) dr ttol: i2hub / importer12
(18:00:51) dr ttol: i dont know about ssh
(18:00:52) dr ttol: some may
(18:00:53) dr ttol: some may not
(18:00:55) dr ttol: all have ftp
(18:01:04) David Gucwa: hm
(18:01:09) David Gucwa: ok
(18:07:07) David Gucwa: procella@princeton.edu doesn't work
(18:10:29) dr ttol: porcella
(18:10:32) dr ttol: cameron typo'd
(18:10:37) David Gucwa: ok
(18:12:32) dr ttol: cmg25@georgetown.edu
(18:12:35) dr ttol: top59gun
(18:16:47) dr ttol: how many profiles so far?
(18:19:07) David Gucwa: 5300
(18:19:27) dr ttol: what schools?
(18:20:00) dr ttol: or is that combined
(18:20:46) David Gucwa: it was all from one school, but I'm checking them now and the emails aren't there
(18:20:55) David Gucwa: they must have just gotten turned off
(18:21:04) dr ttol: fuck
(18:21:30) dr ttol: what school
(18:21:52) David Gucwa: umich
(18:22:16) dr ttol: they just got turned off?
(18:23:25) David Gucwa: wait not umich
(18:23:36) David Gucwa: yale
(18:23:58) David Gucwa: maybe they were never turned on, I'm not sure I checked
(18:24:01) David Gucwa: I thought I did though
(18:24:02) dr ttol: ok
(18:24:13) dr ttol: try the ones with emails
(18:24:16) dr ttol: not the ones without
(18:25:22) David Gucwa: ok I'm going to try bu
(18:25:26) David Gucwa: I just made sure the emails are showing
(18:25:26) dr ttol: ok
(18:26:25) dr ttol: see how many we can get
(18:26:37) dr ttol: did you try the other shells
(18:27:16) David Gucwa: yeah I've got one importing from princeton
(18:27:22) David Gucwa: most of them didn't have ssh open
(18:27:30) dr ttol: you need ssh?
(18:27:35) dr ttol: you said ftp is ok
(18:28:13) David Gucwa: yeah ftp will work
(18:28:19) David Gucwa: I just need to modify some things
(18:28:31) David Gucwa: ssh is just easier
(18:35:36) dr ttol: status
(18:35:38) dr ttol: on bu caching
(18:37:00) dr ttol: do the pton and gtown emails first

(18:37:05) dr ttol: the passwords will change soon
(18:37:48) dr ttol: just make sure they are cached tonight or something
(18:37:50) dr ttol: doesnt have to be now
(18:37:52) dr ttol: bu/umass are priority
(18:41:31) dr ttol: sk1281@columbia.edu
(18:41:32) dr ttol: khalidl
(18:42:55) David Gucwa: it's really hard to get a progress indication now because everything on the server is going pretty slowly
(18:43:07) dr ttol: which server
(18:43:07) dr ttol: theirs?
(18:43:10) David Gucwa: ours
(18:43:18) dr ttol: connectu?
(18:43:21) David Gucwa: i2hub
(18:43:27) dr ttol: where are you storing the sql
(18:43:30) David Gucwa: www.i2hub.com seems to load just fine in my browser though
(18:43:34) David Gucwa: no sql yet
(18:43:39) dr ttol: oh
(18:43:41) David Gucwa: I'm just dumping everything to files
(18:43:42) dr ttol: where are you caching the profiles
(18:43:43) dr ttol: oh
(18:43:45) dr ttol: why
(18:44:09) David Gucwa: makes it a lot easier to move them around from server to server
(18:44:17) David Gucwa: if we want to distribute it
(18:44:19) dr ttol: how are you going to import it
(18:44:36) David Gucwa: just read from the file
(18:44:51) dr ttol: you dont think relational db's are faster than file writing/reading?
(18:46:02) David Gucwa: I can put them into a db eventually if we decide that's faster. I just wanted to have them stored right now in the easiest possible way to work with.
(18:46:45) dr ttol: ok
(18:47:08) dr ttol: the writing to hard drive might be the reason its slow
(18:48:06) David Gucwa: Hm. Probably.
(18:48:28) David Gucwa: it's either IO or bandwidth
(18:48:32) David Gucwa: hard to tell which
(18:49:04) David Gucwa: we've imported about 10,000 profiles from bu
(18:49:24) dr ttol: with emailos?
(18:49:43) David Gucwa: they shut off
(18:49:55) dr ttol: ?
(18:50:03) dr ttol: what shut off
(18:50:03) David Gucwa: I think they have something that checks for this kind of crawling and turns off the emails
(18:50:55) dr ttol: how many emails did we get
(18:52:54) David Gucwa: checking
(18:53:15) David Gucwa: 341
(18:53:23) David Gucwa: That's pretty terrible
(18:53:35) dr ttol: yeah
(18:54:43) dr ttol: we're going into a conf call
(18:54:46) David Gucwa: ok

Conversation with drttol at 2005-02-01 16:12:51 on David Gucwa (aim)
(16:12:51) dr ttol: hey
(16:13:18) David Gucwa: hi
(16:14:24) dr ttol: [16:12] RCommoner: hey what does this mean.......? Warning: mysql_result(): Unable to jump to row 0 on MySQL result index 26 in /home/welcome_i2hub_com/web/oncampus.php on line 162
[16:12] Wayne Chang: where does it say that?
[16:12] Wayne Chang: what university are you at?
[16:13] RCommoner: at the top of the welcome screen. I go to the university of florida
[16:13] Wayne Chang: whats your ip?
[16:13] Wayne Chang: www.whatismyip.com
[16:13] RCommoner: 128.227.95.113
(16:15:02) David Gucwa: i'll take a look at it
(16:15:06) dr ttol: ok
(16:15:29) David Gucwa: hum
(16:15:40) David Gucwa: I think it has to do with the fact that it's Feb 1st
(16:15:48) dr ttol: okay
(16:15:51) David Gucwa: it's in the usage stats part of the code
(16:15:52) dr ttol: im updating the logs now
(16:15:56) dr ttol: er
(16:15:56) dr ttol: the stats
(16:15:58) dr ttol: it'll be fine
(16:16:00) David Gucwa: ok
(16:16:16) dr ttol: status?
(16:16:26) David Gucwa: picture stuff is finished, working on friends importing
(16:16:34) dr ttol: okay
(16:39:24) dr ttol: whats thel url to the importer
(16:40:13) David Gucwa: http://216.127.32.228/import/
(16:41:23) David Gucwa: I think that's not up to date actually
(16:41:34) dr ttol: wheres latest?
(16:42:31) David Gucwa: It's supposed to be http://dg.cu.pnwsoft.com/import/ but I keep having problems with that
(16:42:58) dr ttol: which one do i show cameron
(16:43:35) David Gucwa: the 2nd one, whenever it's actually working
(16:44:21) dr ttol: how are you testing?
(16:44:48) David Gucwa: I haven't been for the past hour or so. It goes up and down pretty frequently.
(16:45:08) David Gucwa: I was able to test that picture importing works
(16:45:27) dr ttol: ok
(16:49:02) dr ttol: what's after friend importing?
(16:49:53) David Gucwa: testing the proxies
(16:50:05) dr ttol: ok
(16:50:09) David Gucwa: then making it send out emails
(16:50:10) David Gucwa: that should be it
(16:50:15) dr ttol: okay
(16:50:19) dr ttol: eta?
(16:51:28) David Gucwa: hopefully 2 hours in total
(16:51:55) dr ttol: ok

Conversation with drttol at 2005-02-20 09:08:31 on David Gucwa (aim)
(09:08:42) David Gucwa: I got your page
(09:09:34) dr ttol: hi
(09:09:45) dr ttol: i tried looking everywhere for your pager email
(09:09:48) dr ttol: where is it in the code?
(09:09:55) David Gucwa: in one of the dbs
(09:10:00) dr ttol: damn it
(09:10:09) dr ttol: i was going through the entire code
(09:10:17) David Gucwa: what's wrong with the importer?
(09:10:22) dr ttol: check this
(09:10:30) dr ttol:
http://www.i2hub.com/dgucwa/face/grabFacebook.php?username=rdegutis@student.umass.edu&password=i2hub123
(09:11:11) dr ttol: ERROR:Thefacebook:Couldn't fetch user ID from main page.
(09:13:00) David Gucwa: it's taking a long time
(09:13:08) dr ttol: yes
(09:15:41) dr ttol: how come b.i2hub.com is never used? (or is it and we just dont know)
(09:16:12) David Gucwa: it should be used some of the time
(09:16:17) David Gucwa: I added it to the proxy list
(09:16:43) dr ttol: ok
(09:17:01) dr ttol: try importing via www.connectu.com/importer
(09:17:02) dr ttol: doesnt work
(09:17:16) David Gucwa: right
(09:17:24) dr ttol: do you think facebook changed their layout
(09:17:37) dr ttol: and are now catching IPs that are trying to do old layout
(09:17:39) dr ttol: and blocking them
(09:18:08) David Gucwa: I think the problem is the proxies
(09:18:57) David Gucwa: I'm trying to load connectu.com through the proxy fetch script and that won't load either
(09:19:11) David Gucwa: possibly we sent them so much traffic that they blocked us
(09:19:48) dr ttol: maybe
(09:20:04) dr ttol: add a.i2hub.com:8888 to the list
(09:20:17) dr ttol: but your proxychecker
(09:20:19) dr ttol: should catch that right?
(09:20:59) David Gucwa: it should
(09:21:05) dr ttol: alright, switch of tactic
(09:21:48) dr ttol: take a look at
(09:21:54) dr ttol: http://www.i2hub.com/checkproxies.com/proxycheck.php
(09:21:56) dr ttol: source:
(09:21:57) dr ttol: http://www.i2hub.com/checkproxies.com/proxycheck.phps
(09:22:20) dr ttol: use that proxychecker instead
(09:24:21) dr ttol: (modify that code to do what the old one was suppose to do)
(09:28:00) dr ttol: another issue: why does importer/facebook on status say green? i assume thats why you didnt get beeped
(09:28:10) dr ttol: (and CW and WW didn't see it)
(09:28:23) David Gucwa: that's a good question
(09:35:01) dr ttol: status?
(09:36:12) David Gucwa: comparing output of your checker to output of my checker
(09:36:40) dr ttol: ok, do we know if your facebook parser needs to be updated?
(09:36:46) dr ttol: or if this is solely a proxy issue
(09:37:08) David Gucwa: I don't know about the facebook format yet
(09:37:12) dr ttol: ok
(09:37:18) David Gucwa: I suspect that isn't the problem
(09:38:27) dr ttol: ok
(09:51:36) David Gucwa: hm

(09:51:39) dr ttol: hm?
(09:51:52) David Gucwa: I think they're doing a browser test or something
(09:51:59) David Gucwa: I can't seem to get to their page at all via links
(09:52:02) David Gucwa: proxies or not
(09:52:17) dr ttol: smart
(09:52:38) dr ttol: can we spoof
(09:52:52) David Gucwa: probably
(09:53:06) dr ttol: whats the most common user-agent
(09:53:51) David Gucwa: IE probably
(09:54:11) dr ttol: ok
(09:54:21) dr ttol: lets rotate the user-agents
(09:54:28) dr ttol: different ie versions
(09:58:18) dr ttol: lets do IE 6.0
(09:58:20) dr ttol: Firefox 1.0
(09:58:38) dr ttol: Safari 1.2
(10:00:20) dr ttol: Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1)
(10:00:32) dr ttol: Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1; SV1; .NET CLR 1.1.4322)
(10:00:38) dr ttol: Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1; SV1)
(10:00:45) dr ttol: Mozilla/5.0 (Windows; U; Windows NT 5.1; en-US; rv:1.7.5) Gecko/20041107 Firefox/1.0
(10:00:52) dr ttol: Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.0)
(10:00:59) dr ttol: Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1; .NET CLR 1.1.4322)
(10:01:05) dr ttol: Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1; .NET CLR 1.1.4322)
(10:01:23) dr ttol: Mozilla/5.0 (Macintosh; U; PPC Mac OS X; en) AppleWebKit/125.5.6 (KHTML, like Gecko) Safari/125.12
(10:01:35) dr ttol: Mozilla/5.0 (Windows; U; Windows NT 5.0; en-US; rv:1.7.5) Gecko/20041107 Firefox/1.0
(10:02:03) dr ttol: Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1; SV1; .NET CLR 1.0.3705; .NET CLR 1.1.4322)
(10:02:10) dr ttol: Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1; SV1; .NET CLR 1.0.3705)
(10:03:35) dr ttol: what's up?
(10:03:50) David Gucwa: trying to change it
(10:04:51) dr ttol: k
(10:04:59) dr ttol: so facebook knows
(10:08:55) David Gucwa: most likely
(10:09:02) David Gucwa: they might not know it's us
(10:09:07) dr ttol: ok
(10:09:17) dr ttol: lets spoof browsers
(10:13:35) David Gucwa: ok the spoof worked
(10:13:43) David Gucwa: i'm still having trouble grabbing profiles though
(10:14:24) dr ttol: did they change it
(10:14:34) David Gucwa: maybe
(10:22:39) David Gucwa: wow
(10:22:47) David Gucwa: they changed around their email display by quite a bit
(10:23:16) dr ttol: ?>
(10:23:18) dr ttol: ?
(10:23:21) dr ttol: explain
(10:23:23) David Gucwa: haha you have to look at it
(10:23:27) David Gucwa: if you log into the facebook
(10:23:35) David Gucwa: and look at the source code for your profile page
(10:23:49) David Gucwa: search the source for "Email:"
(10:24:00) dr ttol: haha
(10:24:03) dr ttol: javascript

(10:24:39) David Gucwa: pretty easy to get around, fortunately
(10:24:58) dr ttol: how?
(10:25:08) David Gucwa: have links render the page instead of dumping source
(10:25:10) David Gucwa: for email
(10:26:05) dr ttol: ok
(10:26:11) dr ttol: lol
(10:26:43) dr ttol: david gucwa is the man
(10:37:11) dr ttol: whats going on?
(10:38:22) David Gucwa: almost there
(10:44:26) dr ttol: can we always have links do all the rendering etc
(10:44:31) dr ttol: link follows
(10:44:31) dr ttol: etc
(10:45:40) David Gucwa: isn't links already doing all the rendering
(10:45:59) dr ttol: i thought you had to change it to render the javascript
(10:46:11) David Gucwa: well, right
(10:51:26) David Gucwa: hmm
(10:51:33) David Gucwa: links doesn't seem to want to render the javascript
(10:51:58) dr ttol: what about kbrowser or whatever its called
(10:51:59) dr ttol: khtml or somehting
(10:52:17) David Gucwa: never heard of it
(10:53:19) dr ttol: mozilla
(10:53:20) dr ttol: firefox
(10:53:22) dr ttol: ephiphany
(10:53:24) dr ttol: links
(10:53:24) dr ttol: opera
(10:53:26) dr ttol: konqueror
(10:53:27) dr ttol: galeon
(10:53:30) dr ttol: all support javascript
(10:53:35) dr ttol: keyword "links"
(10:53:39) dr ttol: http://linuxreviews.org/software/browsers/
(10:56:37) David Gucwa: hm
(10:56:41) David Gucwa: well it's not showing up
(10:57:02) dr ttol: can you try konqueror
(10:57:21) dr ttol: see if its you
(10:57:23) dr ttol: or if its links
(10:58:51) David Gucwa: do they use the same rendering engine
(10:59:30) dr ttol: no
(10:59:46) dr ttol: what about
(10:59:47) dr ttol: elinks
(10:59:55) David Gucwa: well i'm looking at the profile page in mozilla and the email is there
(10:59:57) David Gucwa: elinks = links
(11:00:53) dr ttol: what are some solutions
(11:03:43) David Gucwa: worst case, I write a script that executes all that javascript and gets the email address out of it
(11:04:05) David Gucwa: but there's probably a browser that can render it for me
(11:04:45) dr ttol: http://atrey.karlin.mff.cuni.cz/~clock/twibright/links/features.html
(11:04:59) dr ttol: Javascript support with full user control over script run
(11:05:21) David Gucwa: hm
(11:05:25) David Gucwa: possibly off by default
(11:06:18) dr ttol: wait
(11:06:21) dr ttol: we have 1.00?
(11:06:29) dr ttol: http://atrey.karlin.mff.cuni.cz/~clock/twibright/links/download.html
(11:06:34) dr ttol: links 2.1
(11:06:37) dr ttol: try that

(11:09:06) David Gucwa: k
(11:13:48) dr ttol: success?
(11:14:30) David Gucwa: testing
(11:15:45) David Gucwa: yes
(11:16:35) David Gucwa: now i've gotta parse it out
(11:23:42) David Gucwa: shit, it still won't display
(11:24:04) David Gucwa: if I open up the browser it does, but if I dump the output it doesn't
(11:24:18) David Gucwa: like it's not executing javascript if I tell it to dump
(11:32:48) dr ttol: solutions?
(11:32:57) David Gucwa: I think winston would be able to help me out
(11:33:09) David Gucwa: I'm kind of stuck on this one point
(11:33:30) David Gucwa: also I don't have a lot of time left
(11:34:19) dr ttol: how much more time?
(11:34:31) David Gucwa: about a half hour
(11:34:44) dr ttol: did you configure with --enable-javascript
(11:34:47) David Gucwa: yes
(11:34:55) David Gucwa: the javascript works, I am sure of that. just not when dumping
(11:35:00) dr ttol: what needs to be done
(11:35:03) dr ttol: to get this all set
(11:35:05) David Gucwa: I have no idea
(11:35:29) David Gucwa: I've been googling for this problem but haven't found much of anything
(11:35:41) dr ttol: you need it to dump after it renders
(11:35:43) dr ttol: not before, right
(11:36:23) David Gucwa: right
(11:37:16) dr ttol: it doesnt write to a tmp file somewhere?
(11:37:39) David Gucwa: it does
(11:37:50) dr ttol: cant we look into the tmp?
(11:38:40) David Gucwa: that just contains the html source
(11:39:04) dr ttol: whats the bin name
(11:39:07) dr ttol: for links 2.6
(11:39:27) David Gucwa: links-2.1
(11:40:04) dr ttol: how are you getting it
(11:40:23) dr ttol: whats the entire command
(11:40:54) David Gucwa: look at /var/www/html/fletch.php
(11:41:10) dr ttol: that users links
(11:41:14) dr ttol: and not links-2.1
(11:41:18) dr ttol: and also it users -source
(11:41:20) dr ttol: and not -dump
(11:41:21) dr ttol: try
(11:41:28) dr ttol: links-2.1 -dump
(11:41:30) David Gucwa: it uses 2.1 the 2nd time when I render it
(11:41:41) dr ttol: what do you mean
(11:41:50) David Gucwa: it gets source, then renders it
(11:41:54) David Gucwa: with two separate commands
(11:41:55) dr ttol: oh
(11:41:56) dr ttol: fletch
(11:42:50) dr ttol: try
(11:42:55) dr ttol: -force-html
(11:43:07) David Gucwa: I tried that on command line, it didn't help
(11:44:29) dr ttol: can you save the source
(11:44:30) dr ttol: of one
(11:44:35) dr ttol: so i can try
(11:44:44) dr ttol: to render it
(11:45:00) David Gucwa: yeah go to temp/dump.html

(11:45:24) dr ttol: its right there
(11:45:29) dr ttol: but we have to get it outputted
(11:45:30) dr ttol: damn it
(11:46:46) dr ttol: okay, assuming this is fixed
(11:46:46) dr ttol: what else
(11:46:58) David Gucwa: well then the whole thing should be fixed
(11:47:07) David Gucwa: then you'd just need to make sure the parser works
(11:47:13) dr ttol: statu page fixed?
(11:47:32) David Gucwa: I haven't looked into that
(11:48:56) David Gucwa: oh I found the problem there
(11:49:32) David Gucwa: winston commented something out a while back as a quick fix
(11:49:44) David Gucwa: anyway should I turn it back on? it's just going to page me in 5 minutes
(11:50:01) David Gucwa: well, 20 minutes
(11:50:25) dr ttol: when we fix it, how do we turn it back on? will winston know
(11:50:37) David Gucwa: yeah he's the one that turned it off in the first place
(11:51:03) dr ttol: links-2.1 dump.html > dump2.html
(11:51:12) dr ttol: outputs in ansi
(11:51:15) dr ttol: can we parse that
(11:52:28) David Gucwa: I don't think that executed the javascript
(11:52:33) dr ttol: it did
(11:52:34) David Gucwa: I don't see the email address anywhere in it
(11:52:47) dr ttol: cause its in ansi code
(11:52:50) dr ttol: cat dump2.html
(11:52:54) dr ttol: you'll see it rendered on the screen
(11:53:18) David Gucwa: I don't think I'm seeing the same thing you are
(11:53:51) dr ttol: what do you see
(11:54:01) David Gucwa: a bunch of html source code and then the rendered output
(11:54:09) David Gucwa: but there's no email address
(11:54:48) dr ttol: temp/dump2
(11:54:54) David Gucwa: right
(11:55:00) dr ttol: do you have ansi turned on
(11:55:20) David Gucwa: maybe not
(11:56:09) David Gucwa: how do you check
(11:57:29) dr ttol: what ssh client
(11:58:02) David Gucwa: ssh
(11:58:20) dr ttol: oh
(11:58:24) dr ttol: set display=ANSI
(11:58:27) dr ttol: export
(11:59:08) David Gucwa: that didn't seem to help
(11:59:18) dr ttol: export DISPLAY="ANSI"
(11:59:22) dr ttol: locally
(11:59:24) dr ttol: then ssh in
(11:59:31) dr ttol: then set DISPLAY="ansi" remotely
(11:59:34) dr ttol: then type bash
(11:59:55) David Gucwa: anyway, I have to get going. I think winston could fix this in like 10 minutes
(12:00:24) dr ttol: ok
(12:00:42) David Gucwa: just point him to fletch.php and have him copy it over to fetch.php when it works, then go into the i2hub importer directory and look at grabFacebook2.php
(12:00:53) David Gucwa: for testing the email parsing stuff
(12:01:02) David Gucwa: when that works it should be copied to grabFacebook.php
(12:01:14) dr ttol: grabFacebook2 calls fletch?
(12:01:16) David Gucwa: yes

(12:01:38) dr ttol: ok, and grabFacebook2 looks at the link-2.1 dump output?
(12:01:45) David Gucwa: yes
(12:01:48) dr ttol: ok
(12:01:56) David Gucwa: it concatenates the source output with the dump output
(12:02:06) David Gucwa: fletch does
(12:02:12) dr ttol: ok
(12:02:17) dr ttol: thanks dave
(12:02:20) David Gucwa: no problem
(12:02:44) David Gucwa: i'll send you a summary email tonight for this morning
(12:02:47) dr ttol: ok
(12:02:48) David Gucwa: gotta go
(12:02:49) David Gucwa: later
(12:02:51) dr ttol: see ya

Conversation with javanteal at 2005-01-19 13:40:50 on David Gucwa (aim)
(13:41:40) David Gucwa: Hi, quick question. I'm rdesktopped into the cu server at the moment and I need to create a mysql database for use with my php stuff. What program do I use for that?
(13:42:19) Javanteal: There's one under start/program/mysql
(13:42:31) Javanteal: It's a very nice gui interface made by the makers of mysql
(13:42:42) Javanteal: you need the root password to the mysql server
(13:43:47) David Gucwa: I don't suppose you know it
(13:43:58) Javanteal: here it is:
username: root
password: zxcv98
host: wdb aka 192.168.0.35
schema: connectu
(13:44:03) David Gucwa: thanks
(13:44:08) Javanteal: sure
(13:45:14) David Gucwa: i'm not seeing mysql in the start menu anywhere
(13:45:22) Javanteal: oh?
(13:46:13) Javanteal: C:\Program Files\MySQL\MySQL Query Browser 1.1\MySQLQueryBrowser.exe
(13:46:33) Javanteal: but I'm having trouble with the root password, let me check my logs
(13:48:27) David Gucwa: yeah it's not working for me either
(13:58:34) Javanteal: We need to ask the other developer about it.
(13:58:56) Javanteal: If you want read/write access, you can use:
username: mysql
password:
(14:00:39) David Gucwa: hm
(14:01:09) David Gucwa: well as long as you don't mind a few extra tables in the connectu db
(14:01:23) Javanteal: hmm, well, why do you need to create a new db?
(14:01:34) David Gucwa: I don't. It would just be an organizational thing.
(14:01:48) Javanteal: ya, what tables will they be?
(14:02:16) David Gucwa: I'm putting our ad server code up on connectu, so I need a table to store all the ads in
(14:02:28) David Gucwa: and another table for keeping track of hits
(14:02:53) Javanteal: oh, that's reasonable. is connectu going to use this ad data?
(14:03:19) David Gucwa: I'm not sure. I know i2hub and stallscribbles are.
(14:03:25) David Gucwa: connectu probably will
(14:03:52) Javanteal: ok. While it probably would be good to have a seperate db, we can seperate them later.
(14:03:59) David Gucwa: sure
(14:11:39) David Gucwa: It let me log in but I can't create tables
(14:11:47) David Gucwa: I don't have permissions for it
(14:11:51) David Gucwa: using mysql and blank password
(14:12:30) Javanteal: ya, probably disabled. We're working on rewriting that root password now
(14:13:17) Javanteal: we got the root account back in order, retry
(14:13:23) David Gucwa: same password as before?
(14:13:35) Javanteal: yup
(14:14:04) David Gucwa: it worked, great
(14:15:55) Javanteal: do you know an easy way to add a field to a table in mysql?
(14:18:12) David Gucwa: using command line or this graphical program?
(14:18:31) Javanteal: command line would be better
(14:18:44) David Gucwa: ALTER TABLE (table) ADD (column) (type)
(14:18:55) Javanteal: ah, cool. thanks

(14:19:02) David Gucwa: np
(16:35:28) David Gucwa: Do you have cURL installed on the CU server?
(16:36:08) Javanteal: no, I expect we could get it.
(16:36:13) Javanteal: why?
(16:36:31) David Gucwa: I need it to send info to authorize.net. I can get it myself.
(16:37:04) Javanteal: actually, there might be easier way through php. have you checked?
(16:37:21) David Gucwa: not really
(16:38:26) Javanteal: Also, to my knowledge ww3 is currently not on the net. It is using a NAT to take incoming connections. Outgoing connections won't work until we fix a certain network card.
(16:38:55) David Gucwa: hmm
(16:39:25) Javanteal: It is strange irony that a web server doesn't have net access, but it's temporarily true.
(16:47:22) David Gucwa: do you know of another way to pass POST vars to a site in php?
(16:50:37) Javanteal: Only using a Socket
(16:52:38) Javanteal: fsockopen(), fputs(), fclose(). Curl would probably be easier, I guess.
(16:53:36) Javanteal: http://us3.php.net/manual/en/function.file.php
(16:54:24) Javanteal: see the first comment on that page which explains fetchUrlWithoutHanging
(16:56:03) David Gucwa: that doesn't explain how to do exactly what I need to do
(16:57:25) Javanteal: oh, well curl is ok then
(16:58:45) David Gucwa: I can't even get curl to run, I'm having a dll problem
(16:58:58) Javanteal: hm, I might be able to help
(17:03:48) David Gucwa: I think I got it now
(17:06:02) David Gucwa: yeah I'm all good
(17:06:11) Javanteal: ok, btw, where is libcurl installed to?
(17:06:35) David Gucwa: in the same directory as the ad server scripts
(17:06:49) David Gucwa: curl checks the same directory as it's in
(17:07:01) David Gucwa: I didn't mess with any global stuff on the server
(17:07:04) Javanteal: okay

Conversation with javanteal at 2005-01-28 15:02:51 on David Gucwa (aim)
(15:02:57) David Gucwa: I've got a question about CU
(15:03:04) Javanteal: ok
(15:03:08) Javanteal: go ahead
(15:03:10) David Gucwa: for the importer, I can grab the URL of the picture I want to import
(15:03:17) David Gucwa: where should I put the picture
(15:03:25) David Gucwa: is there a directory for all the profile pictures
(15:03:44) Javanteal: well, we have an upload folder
(15:03:58) David Gucwa: Is that their final destination?
(15:04:36) Javanteal: under upload is a few directories and in each of those directories are different versions of the file: small, med, large
(15:05:37) Javanteal: that's where they are stored. You can see the latest live data we have in c:\inetpub\connectu.com\upload\
(15:08:57) David Gucwa: ok
(15:09:17) David Gucwa: so should I create small/med/large versions of the picture and place them into the appropriate directories?
(15:09:56) Javanteal: Depends entirely on their usage
(15:10:33) Javanteal: you might decide to put the file in inetpub\i2hub.com\upload\pictures.
(15:10:50) David Gucwa: Their usage is that this is going to be the user's profile picture
(15:11:13) Javanteal: if cu will be using these pictures, then they'll need to be in or directory and our database.
(15:13:15) David Gucwa: Okay, which directory and which table in the db
(15:13:35) Javanteal: I'll have to look.
(15:18:38) Javanteal: it seems that someone has deleted all the profile pictures from the database.
(15:18:56) Javanteal: I'll ask around about it.
(15:19:11) Javanteal: The table is my_pictures
(15:19:37) David Gucwa: k
(15:20:39) Javanteal: sample source code can be found in cu_test/account/pictures.php

Conversation with javanteal at 2005-01-31 15:54:44 on David Gucwa (aim)
(15:55:04) David Gucwa: John says that I will need dev space for myself for CU
(15:55:45) Javanteal: ok, will do.
(15:55:51) David Gucwa: ok
(15:56:11) Javanteal: i2hub and import aren't in svn, btw, you'll have to do that
(15:57:44) David Gucwa: i2hub isn't my work
(15:57:48) David Gucwa: just import
(15:57:57) Javanteal: oh, ok
(15:58:05) Javanteal: that's kinda why I didn't mess with it
(16:01:19) Javanteal: it's up. You just need to do the following:
(16:01:51) Javanteal: 1) checkout connectu to \\web3\c$\inetpub\dgch_test and \\web3\c$\inetpub\dgcu_test
(16:02:04) Javanteal: 2) grab the images folder from cu_test and ch_test
(16:02:12) Javanteal: 3) move the include\cache.const.php.hi to include\cache.const.php for your connect hi site
(16:02:39) Javanteal: 4) copy the import directory from cu_test to dgcu_test
(16:03:00) Javanteal: 5) work from hop
(16:03:57) Javanteal: 6) make sure dg.cu.pnwsoft.com works. That site is connected to \\web3\c$\inetpub\dgcu_test\
(16:10:10) David Gucwa: checkout from http://db.pickatime.com:900/svn/Connect ?
(16:11:04) Javanteal: checkout http://db.pickatime.com:900/svn/Connect/connect
(16:12:03) David Gucwa: I'm getting authorization errors
(16:12:30) Javanteal: john probably needs to set you up for that. do you want to ask him?
(16:12:39) David Gucwa: k
(16:20:42) David Gucwa: dg.cu.pnwsoft.com doesn't seem to point anywhere
(16:21:13) Javanteal: so, the deal is that it isn't hooked up via dns
(16:21:30) Javanteal: you have to manually add it to your hosts file if you want to use it
(16:21:37) Javanteal: it is a virtual host on web3
(16:22:26) Javanteal: so, simply add a link in your hosts file from dg.cu.pnwsoft.com to 216.127.32.228
(16:22:30) Javanteal: or you can use hop.
(16:22:50) Javanteal: because I added dg.cu to hop's hosts file
(16:24:30) David Gucwa: what is hop
(16:24:46) Javanteal: hop.pickatime.com is the correct server to develop on
(16:24:58) David Gucwa: I see
(16:25:34) Javanteal: because it is a big workstation, it can handle 10 simultanous rdc, while ww3 can only handle 2 or 3
(16:53:28) David Gucwa: I'm not sure how to access all my files from hop
(16:53:37) Javanteal: ok.
(16:53:44) Javanteal: go to my network places
(16:54:07) Javanteal: there should be c$ on web3 there. That is the c drive of ww3 shared.
(16:54:35) David Gucwa: my network places is blank
(16:54:41) Javanteal: oh?
(16:55:43) Javanteal: try typing it into your address bar like this: \\web3\c$\inetpub\
(16:56:31) David Gucwa: says it can't find it
(16:56:40) Javanteal: ok.. hmm
(16:57:12) Javanteal: you've rdc'ed into hop.pickatime.com, right?
(16:57:23) David Gucwa: yes
(16:59:20) Javanteal: Maybe it's permissions. I'll try one more thing
(17:01:59) Javanteal: Tell John about the problem and maybe he can set you up.
(17:21:05) David Gucwa: if I type dg.cu.pnwsoft.com into MSIE on hop, it just hangs

(17:31:19) Javanteal: yeah, the entire server is down badly
(17:31:25) Javanteal: Winston is working on it
(17:31:52) Javanteal: bad bad stuff, I tell you is going on with our poor servers.

Conversation with jtpickatime at 2005-01-17 13:53:50 on David Gucwa (aim)
(13:54:01) David Gucwa: I'm having trouble logging into http://db.pickatime.com:900/svn/Connect
(13:54:17) David Gucwa: I did it fine on Friday but now it's not accepting my username/password
(13:54:21) JTpickAtime: try 216.127.32.54:900
(13:54:30) JTpickAtime: it is a dns problem.
(13:55:22) David Gucwa: k
(13:56:34) David Gucwa: to review: my username is dgucwa and my password is qwer1234$R ?
(13:56:38) David Gucwa: because that does not seem to work
(13:56:48) JTpickAtime: PICKATIME\dgucwa
(13:56:58) JTpickAtime: svn is case sen.
(13:57:38) David Gucwa: I thought I tried that too
(14:04:30) David Gucwa: When I log in incorrectly it seems to block me from trying to log in for a little while
(14:04:57) David Gucwa: I cleared my cache and cookies so I don't think that's the problem
(14:33:32) David Gucwa: I'm really having a lot of trouble logging into this system
(14:54:40) JTpickAtime: oh, sec.
(14:54:42) JTpickAtime: no
(14:55:08) JTpickAtime: still failing, right?
(14:55:27) David Gucwa: yes
(14:55:55) JTpickAtime: add an entry in your hosts file
(14:56:01) JTpickAtime: 216.127.32.54 db.pickatime.com
(14:56:12) JTpickAtime: And a note to remove it in a day or so.
(14:56:28) JTpickAtime: Then you should be able to get to db.pickatime.com:900
(14:56:55) David Gucwa: well, I was using the IP before
(14:57:17) JTpickAtime: Oh, right but you couldn't login.
(14:57:24) David Gucwa: yes
(15:07:33) David Gucwa: any ideas why?
(15:15:10) JTpickAtime: work with mike on it.
(15:15:27) David Gucwa: Okay, what's mike's screen name
(15:15:36) JTpickAtime: mrhayner
(15:16:46) David Gucwa: Oh, what's your name by the way? Wayne never told it to me.
(15:17:02) JTpickAtime: John Taves
(15:17:09) David Gucwa: nice to meet you John
(15:17:31) JTpickAtime: oh, sorry, I was forgetting who you were.
(15:30:15) JTpickAtime (John): What do you want to do with the source.
(15:30:16) JTpickAtime (John): ?
(15:30:32) JTpickAtime (John): The whole project has blown up, so it is not clear to me that we should bother to fix this problem.
(15:31:03) JTpickAtime (John): Do you just need to view the jungalu code to figure out what you want to do?
(15:32:01) David Gucwa: Wayne told me that I was going to be using the login system on connectu in order to make some transactions for another project. I need a way to interface with that system.
(15:32:16) David Gucwa: Honestly I'm pretty lost.
(15:32:52) JTpickAtime (John): well cool your jets for a while.
(15:32:57) JTpickAtime (John): I am not sure what the plan is.
(15:33:48) David Gucwa: hmm
(15:35:28) David Gucwa: I guess I'll call Wayne then

Conversation with jtpickatime at 2005-01-25 19:05:23 on David Gucwa (aim)
(19:05:23) JTpickAtime (John): you there?
(19:05:58) David Gucwa: yeah
(19:06:27) David Gucwa: what's up?
(19:06:38) JTpickAtime (John): are you using web3?
(19:06:45) David Gucwa: no
(19:07:01) JTpickAtime (John): oh, right you're gone now
(19:07:11) JTpickAtime (John): you were a few minutes ago, right?
(19:07:14) JTpickAtime (John): What do you do on it?
(19:07:20) David Gucwa: I was on pickatime
(19:07:34) David Gucwa: The CU importer script is on there
(19:07:37) JTpickAtime (John): ww3.pickatime.com = web3 = cu.pnwsoft.com = ch.pnwsoft.com = jt.pnwsoft.com
(19:07:41) David Gucwa: ok
(19:08:35) David Gucwa: i basically just make changes to the importer page
(19:08:50) JTpickAtime (John): what's the importer page?
(19:09:12) David Gucwa: it imports user profiles from thefacebook, friendster, etc into your CU account
(19:09:23) JTpickAtime (John): oh cool.
(19:09:41) JTpickAtime (John): Are you using subversion?
(19:09:45) David Gucwa: no
(19:10:09) JTpickAtime (John): is the importer a new thing that you'll be adding to the source?
(19:10:17) David Gucwa: Yeah, eventually

Conversation with jtpickatime at 2005-01-31 15:36:28 on David Gucwa (aim)
(15:36:53) David Gucwa: I lost permissions for the files on web3 that I'm working on
(15:37:50) JTpickAtime (John): are you talking about the tortoise subversion thing?
(15:38:02) David Gucwa: no
(15:46:02) David Gucwa: There are several files in C:\Inetpub\cu_test\import\ which I have lost write permissions for
(15:50:05) JTpickAtime (John): oh
(15:50:07) JTpickAtime (John): good
(15:50:16) JTpickAtime (John): We are using that as our staging server
(15:50:38) JTpickAtime (John): So, if you want a dev server for yourself, joel will need to create one.
(15:55:58) David Gucwa: ok I'll talk to him about it
(15:56:30) JTpickAtime (John): what files were you changing?
(15:56:48) David Gucwa: C:\Inetpub\cu_test\import\index.php
(15:57:00) David Gucwa: Which I originally uploaded

Conversation with rrrmrprim8 at 2005-02-10 18:42:42 on David Gucwa (aim)
(18:42:42) Winston: hey i need to add something to importer
(18:42:48) David Gucwa: ok what
(18:42:53) Winston: on the import page
(18:42:56) Winston: where you have the radio buttons
(18:43:01) Winston: to select which Network's option you want to use
(18:43:08) Winston: we need to write the name of the network under said option
(18:43:46) Winston: like
Name
[____________________]
[Friendster]
[____________________]
[Facebook]
(18:43:51) Winston: know what i mean ?
(18:43:53) David Gucwa: ok
(18:43:57) David Gucwa: one thing though
(18:44:14) Winston: i'm not seeing if that info is passed back from grabConnectu.php
(18:44:24) David Gucwa: if, for example, both Facebook and Friendster have "Dave" as the name, I just merge them into one option
(18:44:34) David Gucwa: so it might not always be so clear cut
(18:45:27) Winston: ok
(18:45:32) Winston: lets just pick the first one in that case maybe
(18:45:36) Winston: can we just say one of them there
(18:45:38) David Gucwa: also, I'm not sure why that info is relevant
(18:48:53) David Gucwa: you should be able to know which info is coming from where right in the index.php
(18:49:05) Winston: they
(18:49:08) Winston: just asked for it
(18:49:09) Winston: i'm not sure
(18:49:16) Winston: ok
(18:49:23) Winston: i'll look again and try to add it
(18:49:28) Winston: didnt see if it was being passed back in the array
(18:49:31) Winston: from the grab script
(18:50:04) David Gucwa: it isn't
(18:50:25) David Gucwa: but you should know which script info is coming from where
(18:50:27) David Gucwa: and just tag it then
(18:50:45) David Gucwa: like, if you're requesting grabFacebook.php, then it's Facebook
(19:09:08) Winston: ok
(19:11:43) David Gucwa: I need write permissions for /importer/index.php
(19:25:01) Winston logged out.
(19:27:47) Winston logged in.
(19:44:20) David Gucwa: are you editing anything in the dev server
(19:45:36) Winston: dev.theyearbook.org
(19:45:40) Winston: yea
(19:46:20) David Gucwa: oh okay
(19:46:43) David Gucwa: I'm just about to write to something on dev.connectu and wanted to make sure
(19:46:57) David Gucwa: but anyway I need write permissions for it
(19:47:06) Winston: ok
(19:47:09) Winston: giving you write for everything
(19:47:10) Winston: perms
(19:47:12) David Gucwa: k
(19:47:14) Winston: i hate how it keeps resetting the perms
(19:47:18) David Gucwa: yeah it's annoying

(19:47:22) Winston: sure u hate it more
(19:47:29) David Gucwa: heh
(19:47:37) Winston: ok
(19:47:38) David Gucwa: I wish I didn't have to keep bothering you about it
(19:47:38) Winston: fixed
(19:47:51) Winston: need to put you in sudo or something
(19:47:53) Winston: so you can do it yourself
(19:47:58) David Gucwa: yeah
(19:56:05) David Gucwa: I commited a new version of index.php
(19:56:11) David Gucwa: just a minor change
(19:56:18) Winston: ok cool
(19:56:25) Winston: thanks for letting me know
(19:56:34) Winston: never change that one very much

Conversation with rrrmrprim8 at 2005-02-23 16:55:50 on David Gucwa (aim)
(16:56:14) David Gucwa: does jungalu.com point to the web.connectu.com server?
(16:56:32) Winston: yeah
(16:56:53) David Gucwa: I'm getting a 404 on a file that's definitely on the server
(16:57:01) Winston: wierd
(16:57:03) David Gucwa: strangely, I wasn't getting a 404 on it a few minutes ago
(16:57:09) Winston: yeah that's some wierd junk.
(17:00:34) David Gucwa: I don't think it is pointing to web.connectu.com
(17:00:47) Winston: its pointing to the ip
(17:00:53) Winston: 207.114.225.164
(17:01:25) Winston: its definately pointing to that server... i set up the ssl on it and watched it as i tested and stuff
(17:01:51) David Gucwa: hm
(17:02:54) David Gucwa: something screwy is going on
(17:08:25) David Gucwa: sometimes I get the page and sometimes I get a 404
(17:08:38) Winston: thats wierd as hell
(17:09:01) David Gucwa: also when I log in, I usually see the account balance that was in the old database
(17:09:14) David Gucwa: only occasionally I see the newer one
(17:09:37) Winston: WTF?
(17:09:49) Winston: hmm
(17:10:31) Winston: the site on the new server has no icon on the top right
(17:10:33) Winston: so that's one indicator
